SACRAMENTO

January 15, 1958

HONORABLE GOODWIN J. KNIGHT, *Governor, and*
Members of the Legislature of the
State of California

GENTLEMEN: There is transmitted herewith a supplement to Bulletin No. 21 of the Department of Water Resources entitled, "Report on Irrigation and Water Storage Districts in California for 1951-1955." This is the latest of a series of similar reports which have been published periodically since 1929.

Irrigation and water storage districts are required by law to submit reports of their operations to the Department of Water Resources and the California Districts Securities Commission and to publish verified statements of their financial condition annually. Information contained in Bulletin No. 21 has been obtained from these reports and statements. The present supplement contains information on district activities for the period 1951-1955.

Very truly yours,

Harvey O. Banks

ORGANIZATIONAL CHANGES

On July 5, 1956, pursuant to the provisions of Chapter 52, Statutes of 1956, First Extra Session, the Department of Water Resources was created and placed under the control of a director appointed by the Governor. The department succeeded to, and is vested with, all the powers, duties, purposes, responsibilities, and jurisdiction vested in the former Division of Water Resources and the State Engineer, with the exception of certain powers pertaining to water rights which were vested in the State Water Rights Board.

INTRODUCTION

A series of reports on irrigation and water storage districts in the State of California were issued by the former Division of Water Resources of the Department of Public Works, to supplement and bring up to date the statistical information contained in Bulletin No. 21, published in 1929. These reports, Bulletins Nos. 21-A through No. 21-P, cover the period from 1930 through 1950. Hereafter, the suffix for the Bulletin No. 21 series will be omitted. The title of supplemental reports will be as shown on the cover of this report.

This report contains information on 114 irrigation districts and four water storage districts for the five-year period, 1951-55. As of December, 1955, there were 4,940,000 acres within district boundaries. Over 2,502,000 acres were reported irrigated. The districts reported total annual water diversions from wells and surface sources amounting to over 12,570,000 acre-feet. The reported assessed valuation exceeded $314,000,000, while the total of all districts assets, current and fixed, exceeded $287,000,000. Total outstanding bonded indebtedness was reported to be more than $121,000,000.

A comparison of data reported by individual districts for the year 1950 with that reported for the year 1955 shows an increase in total water diverted annually of approximately 1,334,000 acre-feet; an increase in total area within district boundaries of about 703,000 acres, with an increase in total area irrigated of about 170,000 acres; an increase in the total assessed valuation of the districts of over $59,745,000; and an increase in total bonds outstanding of $48,000,000.

Of this latter figure, $41,500,000 represents outstanding bonds of the South San Joaquin and Oakdale Irrigation Districts, which were issued to finance the Tri-Dam Project on the Stanislaus River, a joint undertaking.

Irrigation and water storage districts are required by law to submit reports of their operations to the Department of Water Resources and the California Districts Securities Commission, and to publish verified statements of their financial condition annually. (Water Code, Sections 20025, 22335-22338, 24274, 44428, 44429, 44431.) Information contained in this bulletin has been obtained from these reports and statements.

No field work was performed to verify or check the data assembled. However, figures and statements from other sources have been compared and the tabular results presented herein are believed to be reasonably correct.

A map showing the names and locations of California irrigation and water storage districts follows the "Tables of Statistical Data."

ESTABLISHMENT OF NEW DISTRICTS

Six irrigation districts, encompassing a total area of 376,620 acres, were organized during the period, 1951-55. All of the districts, in accordance with the provisions of the Water Code, were reported upon by the State Engineer prior to formation.

This report includes descriptions of the six irrigation districts organized during the period, 1951-55. These districts are: (1) Central California Irrigation District; (2) Elk Grove Irrigation District; (3) Galt Irrigation District; (4) Kinneloa Irrigation District; (5) South Bay Irrigation District, and (6) Tulelake Irrigation District.

CENTRAL CALIFORNIA IRRIGATION DISTRICT

Location:	25 miles west of Merced, in the Counties of Fresno, Merced, and Stanislaus
Date of Organization Election:	October 9, 1951
Gross Area:	150,000 acres
Office Address:	830 Sixth Street, Los Banos

The Central California Irrigation District was organized to acquire the water rights, canals, and other works of the San Joaquin Canal Company, and to engage in the business of furnishing irrigation, municipal, and industrial water service to the area served by the canal company. Formation of the district was favorably reported upon by the State Engineer. Votes cast at the formation election were 1,288 for and 1,201 against formation.

History

The original project was started in 1871 by the San Joaquin and Kings River Canal Company. The plans contemplated a combination irrigation-navigation canal system, with the principal canals large enough for barge navigation for transporting goods to valley towns. Shortly after construction started, the then incomplete project was taken over by the San Joaquin and Kings River Canal and Irrigation Company, later known as the San Joaquin Canal Company, a subsidiary of the Miller and Lux interests. The Company completed what is now the principal main canal system in a period of less than 10 years. At about the same time, and extending through the years, a number of other smaller companies were organized and irrigation systems were constructed throughout the San Joaquin River Basin. In 1936, the San Joaquin Canal Company acquired without cost the rights, title, and interests of (1) the Poso Canal Company, a mutual company with a system including over 86 miles of canals and ditches; (2) the Sullivan Extension of the Outside Canal, comprising 4.46 miles of canal, and (3) 1.33 miles of the San Luis Canal.

In 1936 the Federal Government took steps toward the construction of the Central Valley Project. Under this project the San Joaquin Canal Company, along with a number of other irrigation companies, entered into an agreement with the Federal Government for the transfer and exchange of certain rights to divert, store, and distribute waters of the San Joaquin River. At the same time, agreements were made for the division of water between the several irrigation companies serving the area. The major portion of the San Joaquin Canal Company's water supply was established by the provisions of these agreements.

In January, 1950, action was initiated toward the formation of the Central California Irrigation District, with the object of acquiring the San Joaquin Canal system of the Miller and Lux Company. Proponents of the District presented a petition for formation to the Merced County Board of Supervisors in February, 1951. Shortly after the final hearings held on August 1, 1951, the Miller and Lux Company filed suit against the Board of Supervisors, contesting the legality of the formation proceedings. On October 9, 1951, with the suit still unsettled, an election was held with the majority vote favoring formation of a district. As a result, the Superior Court of Merced County on July 1, 1952, rendered a decision declaring the district to be a duly formed and existing irrigation district. The case was unsuccessfully appealed.

Officials of the San Joaquin Canal Company and the newly formed irrigation district reached an agreement in March, 1953, concerning the sale of facilities of the canal company. A price of $4,200,000 was agreed upon for the purchase of the canal system, incidental properties, and water rights along the San Joaquin River in Fresno, Merced, and Stanislaus Counties. With the approval of the California Districts Securities Commission, a bond election was held August 25, 1953. At this election, residents of the district approved the issuance of bonds by a vote of

1,492 to 224. The bonds were sold to the Bank of America at an average interest rate of 3.8796 per cent. The district assumed active control of the former San Joaquin Canal Company properties on January 1, 1954.

Description of District

The district is located on the west side of the San Joaquin Valley, between the San Joaquin River and the Delta-Mendota Canal in Stanislaus, Merced, and Fresno Counties. In general, topography of the district area is flat or gently rolling. Elevations range generally from 200 feet on the west to 50 feet on the north near the San Joaquin River. The soils of the district are chiefly basin soils and soils of recent and older alluvial fan origin. According to a crop survey made in 1955, 134,460 acres of the gross district area of 154,000 acres were irrigated. The crop distribution was as follows:

Crop	*Irrigated acreage (1955)*
Alfalfa	51,930
Grain	16,895
Permanent pasture	12,505
Cotton	11,748
Rice	10,050
Beans	7,588
Corn	7,142
Grass	5,535
Orchard	2,582
Truck crops	3,857
Other field crops	4,628
Total	134,460

The climate of the area is semiarid in nature. Summers are long, hot, and dry, while the winters are usually mild. The average annual precipitation is approximately 10 inches. Killing frosts occur at infrequent intervals.

The towns of Newman, Gustine, and Los Banos lie within the boundaries of the district. The urban population within the district is approximately 9,500; the rural population is approximately 20,000.

The district is adequately served by transportation, processing, and marketing facilities.

The total assessed valuation placed on the district lands at the time of the formation was in excess of $14,860,000.

Water Supply

The water supply of the district is made available by a reservation of San Joaquin River water for "crop lands" in Section 9(a) of the Contract for Purchase of Miller and Lux Water Rights, executed in July, 1939, between the United States and Miller and Lux, Incorporated. Another contract for exchange of water, executed on July 27, 1939, between the United States and the San Joaquin, San Luis, Columbia, and Firebaugh Canal Companies, provided for substitution of a water supply from the Central Valley Project for the "crop land" reservation in Schedule 1 of the purchase contract, and guaranteed to these companies not less than 72 per cent of the maximum quantities to which they would be entitled under Schedule 1.

The district has supplemented deficient water supplies from the San Joaquin River by pumping from ground water within the district and by purchasing Central Valley Project water from the United States.

In the irrigation season of 1955, the district diverted 600,000 acre-feet of water from its various sources and delivered 517,000 acre-feet to its customers both in and out of the district.

ELK GROVE IRRIGATION DISTRICT

Location:	About 12 miles southeast of Sacramento in Sacramento County
Date of Organization Election:	August 29, 1952
Gross Area:	84,000 acres
Office Address:	P. O. Box 334, Elk Grove

The Elk Grove Irrigation District was organized for the purpose of negotiating with the United States for a supplemental water supply from Folsom Reservoir of the Central Valley Project. The State Engineer reported favorably upon formation of the district. Votes cast at the formation election were 679 for and 38 against formation.

Description of District

The district comprises 84,000 acres lying entirely in Sacramento County, extending southerly from U. S. Highway 50 to the Cosumnes River, from the east boundary of Mather Air Force Base to approximately two miles west of Lower Stockton Road.

The topography is undulating to rolling in character with a general slope from east to west. Elevations range from 5 to 175 feet with the major portion of the district being below elevation 50 feet.

The climate of the area is typical of the two-season climate of the lower Sacramento Valley, characterized by a long, dry, rather warm season from May through October, followed by a cool rainy season from November through April. The average annual precipitation of about 17.5 inches occurs principally between De-

cember and March. Temperatures are seldom lower than 20° F. or higher than 100° F. The frost-free period normally exceeds eight months. The soils in the district are principally of the San Joaquin series, which are medium to heavy textured soils underlain with hardpan, and are best suited for shallow-rooted crops and irrigated pasture. Based on a survey conducted by the United States Bureau of Reclamation and modified by the former Division of Water Resources, the lands have been classified as follows:

Land classification	*Gross acreage*	*Per cent of total*
1	1,200	1
2	7,400	9
3	72,900	87
6	2,500	3
Totals	84,000	100

The ultimate net irrigable area is estimated to be about 68,000 acres, or 81 per cent of the lands in the district.

Crop surveys conducted by the Bureau of Reclamation and the Division of Water Resources in 1950 and 1951 showed that about 23,200 acres were under irrigation distributed by crops as follows:

Crop	*Irrigated acres, 1950-51*
Pasture	14,000
Alfalfa	2,500
Rice	300
Truck	500
Tomatoes	200
Sugar beets	300
Deciduous orchards	600
Grapes	3,400
Hay and grain	900
Miscellaneous	500
Total	23,200

The total assessed valuation of the district in 1953 was in excess of $2,000,000.

The town of Elk Grove is the principal community located within the exterior boundaries of the district, but is excluded from the district. Major rail and highway facilities serve the area. Marketing and processing facilities are provided by the cities of Sacramento and Stockton.

Water Supply

The lands within the district now being irrigated receive their water supply from wells or by pumping from drains in the district. In November, 1953, the water table in the district ranged from 10 feet to over 110 feet from ground surface. Although the area is not yet fully developed, the average decline of the groundwater table for the period 1946-1953 has been about 1.3 feet annually.

Several small intermittent streams enter the district but do not carry an appreciable or dependable water supply.

To develop the area fully, importation of water from an outside source is necessary. The Folsom South Canal, proposed by the United States Bureau of Reclamation, could supply the necessary water from the American River.

GALT IRRIGATION DISTRICT

Location:	In the vicinity of the town of Galt in Sacramento County
Date of Organization Election:	September 18, 1953
Gross Area:	31,000 acres
Office Address:	P. O. Box 187, Herald

The Galt Irrigation District was formed for the purpose of obtaining a supplemental water supply for the district lands primarily from the American River via the proposed Folsom South Canal of the Central Valley Project, and from available ground water. Formation of the district was favorably reported upon by the State Engineer. Votes cast at the formation election were 296 for and 6 against district formation.

Description of District

The district, with a gross area of approximately 31,000 acres, lies within the south central area of Sacramento County, adjacent to and north of the town of Galt.

The terrain of the district is chiefly of undulating character, sloping generally to the west at about eight feet per mile. Elevations range from 20 feet to 135 feet, with the major portion of the district lying below elevation 70 feet.

Approximately 77 per cent of the soils in the district are of the San Joaquin series and 17 per cent are of the Redding series. Small areas of soils of the Honcut, Bear Creek, Sacramento, and Alamo series are located along the flood plains of the minor tributaries that traverse the district.

Although the topography is undulating and underlain with hardpan, all of the land is capable of supporting irrigated agriculture, lending itself to the

growth of shallow-rooted crops and irrigated pasture. A crop survey was made by the United States Bureau of Reclamation and the Division of Water Resources in 1950, at which time the following irrigated crops were grown in the area:

Crop	*Irrigated acreage, 1950*
Pasture	5,254
Grapes	266
Field crops—single	12
Field crops—double	276
Alfalfa	308
Apricots	18
Total	6,134

In 1955, the total assessed valuation of the lands in the district was $605,000.

The climate of the area is the two-season climate typical of the lower Sacramento Valley, characterized by long, dry, and warm summers, usually extending from May through October, followed by a cool and damp winter season from November through April. Temperatures range from an occasional 20° F. to over 100° F. The frost-free season normally exceeds eight months. The average annual precipitation, most of which occurs from December through March, is approximately 18 inches.

The district is adequately served by transportation facilities. A main line of the Southern Pacific Railroad, U. S. Highway 99-50, the Central California Traction Company, and numerous county roads traverse the district. Processing and marketing facilities are provided in the cities of Stockton, Lodi, and Sacramento.

The largest community in the vicinity of the district is the town of Galt, with a population of approximately 1,550. Several small communities are located within the district.

Water Supply

At present, the irrigation and domestic water requirements within the district are obtained by pumping from ground water. Annual changes in the elevation of the ground water table in the area are small. The depth to water in wells within the district in the fall of 1953 ranged from 20 to 60 feet. Intermittent surface flows occur in Laguna and Badger Creeks during periods of winter and spring rainfall, but serve only to contribute to ground water replenishment in zones bordering the creeks. The district could obtain an adequate water supply from Folsom Reservoir when the Folsom South Canal is constructed. This canal could serve the entire Galt Irrigation District by gravity, with the exception of small areas along the east boundary.

KINNELOA IRRIGATION DISTRICT

Location:	Two miles north of Pasadena, in Los Angeles County
Date of Organization Election:	September 29, 1953
Gross Area:	500 acres
Office Address:	3127 Doyne Road, Pasadena

The Kinneloa Irrigation District was organized for the dual purpose of purchasing water from The Metropolitan Water District of Southern California through the Foothill Municipal Water District and purchasing a well and gravity system from the Kinneloa Water Company. The State Engineer reported favorably upon formation of the district. 48 votes were cast in the formation election, all of which were favorable.

History

The Kinneloa Water Company (Kinneloa Canyon Estates, Inc.) previously served the developed area of the district. The sources of water were the old Lockhart (or Kinneloa Ranch) springs and tunnels located in the mountainous portion of the district. The company owned a well located near Eaton Wash, and had an adjudicated right to pump 61 acre-feet annually from the underlying ground water basin. The company had not operated the well for some time prior to the district's formation. The company's right to pump 61 acre-feet of water was sold to other users each year under terms of an exchange agreement, which was made a part of the decree in the case of *Pasadena* v. *Alhambra* 33 C. 2d 908, 207 P. 2d 17. The district, except for about 150 acres of mountainous land, is included within the existing Foothill Municipal Water District.

Description of District

The district, with a gross area of 500 acres, lies entirely within Los Angeles County. The southern portion of the district adjoins the City of Pasadena on the east, extending easterly about 4,000 feet and northerly about 8,500 feet. Over 200 of the 500 acres in the district lie on the steeply sloping face of the San Gabriel Mountains. This area was included in the district primarily to protect the existing water supply, derived from springs and tunnels. The lands which are suitable for extensive development slope down from the toe of the mountains at an elevation of about 1,500 feet to the east bank of Eaton Wash,

at an elevation of about 1,100 feet, with an average slope over the greater portion of the area of approximately 400 feet per mile. The portion of the district lying on the steep slopes of the San Gabriel Mountains rises from the foot of the mountains to an elevation of over 3,300 feet.

The excellent agricultural soils of the Hanford series cover most of the lower portion of the district. At the time of formation of the district, development in the lower portion was restricted to estates and first-class residential properties, together with a few small avocado groves. Much of the district area was comprised of undeveloped brush land. The location of the district with respect to the Los Angeles Metropolitan area, its elevated position above The San Gabriel Valley, and the topography of the land within the district make a surburban type of development most probable.

The assessed valuation of the lands included within the proposed district for the fiscal year 1952-53 was $452,320.

The climate of the area is of a semitropic nature. Temperatures range from an infrequent low of 32° F. to over 100° F., with an average temperature of about 62° F. Annual precipitation exceeds 19 inches.

There are no towns located within the district. At the time of formation, the population of the district was approximately 300. The adjoining city of Pasadena has a population in excess of 100,000, while that of the nearby metropolitan area of Los Angeles is over 4,500,000.

Water Supply

The water supply for the developed area within the district originates in springs and tunnels located in the mountain portion of the district. During the period 1946-1952, an average of 48.14 acre-feet annually was diverted from this source, and used in the district. An additional supply is available through membership in the Foothill Municipal Water District, which is a component district of The Metropolitan Water District of Southern California.

SOUTH BAY IRRIGATION DISTRICT

Location:	About 3½ miles south of San Diego city limits, in San Diego County
Date of Organization Election:	March 16, 1951
Gross Area:	13,100 acres
Office Address:	371 E Street, Chula Vista

The South Bay Irrigation District was organized for the purpose of providing an agency that could effect annexation to the San Diego County Water Authority, and thus increase the area's entitlement to Colorado River water. Annexation would also simplify the distribution of Colorado River water through the distribution system of the California Water and Telephone Company, by which the area is served.

The State Engineer reported favorably upon formation of the district. Votes cast at the formation election were 1,062 for and 101 against formation.

History

The general area in which the district is located was settled, and most of the present-day towns were laid out during the boom period starting with the completion of the Atchison, Topeka and Santa Fe Railroad in 1885 and lasting through the year 1889. The City of Chula Vista was incorporated during this period by owners of the Rancho De La Nacion. The San Diego Land and Town Company was formed at this time for the purpose of real estate promotion.

In 1886, the company started construction of the Sweetwater Dam on the Sweetwater River, with an impounding capacity of 27,700 acre-feet. In 1888, on completion of the dam and a distribution system, the company introduced a settlement plan under which a 20-acre tract of land, furnished with water, was supplied to each applicant who would agree to plant it to citrus and care for the orchard for at least five years. At the end of that time, the planter was deeded 10 acres of his orchard, while the company retained the other 10 for sale to other prospects. This early promotion, plus the completion of the Atchison, Topeka, and Santa Fe Railroad, aided substantially in development of the area.

In 1935, the Sweetwater Irrigation System of the San Diego Land and Town Company was acquired by the California Water and Telephone Company. The system was eventually expanded by the addition of Loveland Dam on the Sweetwater River, about 18 miles above the existing Sweetwater Reservoir, with an impounding capacity of 25,400 acre-feet. This dam was completed in 1945.

The proposal to form an irrigation district in the south San Diego Bay area was under consideration for a number of years prior to the actual formation. The original plan was to organize all land served by the Sweetwater Division of the California Water and Telephone Company, including the incorporated areas of National City and Chula Vista and the Sweetwater Valley to the east. Petitions were circulated, and, although the required number of individual signatures was obtained, the additional requirement that the pe-

titioners represent the owners of land comprising 20 per cent of the assessed valuation of all land included in the proposed district was not accomplished. Organizers in National City then withdrew from the plan, but proponents for the district from Chula Vista and adjacent areas continued their efforts until the district was organized.

Description of District

The district is located entirely within San Diego County, extending along the south shore of San Diego Bay, between Sweetwater and the Otay River and inland along Sweetwater Valley to the vicinity of Sweetwater Dam. In fixing the boundary effort was made to stay within the service area of the California Water and Telephone Company.

The topography in the northwestern portion of the district is irregular, with elevations varying from 85 feet to 425 feet, and with slopes decreasing generally toward the Sweetwater Valley. The terrain in the western and southern end of the district is quite uniform, with slopes of about 75 feet per mile toward the west.

The climate along the bay shore is temperate, with a seasonal and daily range in temperature that is probably smaller than anywhere else in the State. A temperature above 90° F. seldom occurs, while a low of 32° F. is rare. However, temperature ranges inland from the shore and in the higher elevations are greater. The average annual precipitation over the district area is approximately 11 inches.

The soils of the district consist primarily of fine sandy loams. They are generally loose and friable, but have sufficient fines to retain moisture, and are well suited to irrigated agriculture.

The principal crops grown in the district are vegetables, with celery and tomatoes predominating, and citrus fruits, principally lemons. Because of the temperate climate, the growing of winter truck crops is an important industry, as they mature at a time when prices are attractive. The annual value of crops produced in the district has been estimated to exceed $5,000,000. Lemon groves are being removed in many areas within the district to make way for the ever-expanding residential development or for more intensive types of cultivation. The assessed valuation of the district at the time of formation was $4,768,000.

The City of Chula Vista and the communities of Lincoln Acres, Bonita, Sunnyside, Castle Park, Harborside, and Otay are within the district. Chula Vista has a population of about 16,000, while the total population for the district is estimated to be 25,000. Adequate rail, highway, processing, and marketing facilities serve the area.

Water Supply

Completion of the Sweetwater Dam and distribution system in 1888 by the San Diego Land and Town Company was the first important step in providing a local water supply for the valley and the bay shore areas in the vicinity of National City and Chula Vista. In 1945 the addition of Loveland Dam to the system by the California Water and Telephone Company, which acquired the original system in 1935, further increased the water supply. The California Water and Telephone Company has 13 wells in the valley below the Sweetwater Dam. Water was pumped directly from the wells into the system from 1945 to 1948, when Colorado River water was made available. These wells were then used to augment the water supply available from the reservoir during the low runoff years. They are now held in reserve for emergency and to permit recovery of the ground water levels.

National City and Chula Vista became members of the San Diego County Water Authority when it was incorporated on June 9, 1944. In 1947, an emergency created by a deficient water supply confronted these two cities. The La Mesa-Sweetwater pipeline, through which Colorado River water would be supplied, was still under construction, and additional supplies could be obtained only through connections with the distribution lines of the City of San Diego.

Under an agreement between the interested parties, a portion of the Colorado River water delivered through the aqueduct to San Vicente Reservoir was charged by the authority to the account of the distressed agencies. Through interconnections, it was possible to deliver Colorado River water from San Vicente Reservoir directly to these agencies, and such deliveries began on November 24, 1947. This arrangement remained in force until the completion of the La Mesa-Sweetwater pipe line on May 14, 1948. Delivery of Colorado River water was then made to Chula Vista and National City through Sweetwater Reservoir and the distribution system of the California Water and Telephone Company.

The City of Chula Vista, as a member agency of the San Diego County Water Authority, is entitled to delivery of Colorado River water to supplement its water supply from the Sweetwater River. Distribution of Colorado River water to the city is made under terms of an agreement with the California Water and Telephone Company. The remaining area of the district is entitled to service from only the local supply. The organization of the district, followed by the annexation of the district to the San Diego County Water Authority in November, 1952, resulted in obtaining Colorado River water for the entire area.

TULELAKE IRRIGATION DISTRICT

Location:	Adjacent to the Oregon-California boundary in Siskiyou and Modoc Counties
Date of Organization Election:	March 11, 1952
Gross Area:	93,419 acres
Office Address:	325 Main Street, Tulelake

The Tulelake Irrigation District was organized primarily for the purpose of contracting with the United States for repayment of the irrigation construction costs allocated to the Tule Lake Division of the Klamath Project.

History

The United States Reclamation Service began a preliminary reconnaissance of the Klamath area in 1903. The Klamath Project was authorized by the Secretary of the Interior in 1905. One of the principal features of the project was the reclamation of the Tule Lake bed.

The work began in 1909 and was accomplished over a period of years. The project included Clear Lake and Gerber Reservoirs, controlling runoff of Lost River; the Lost River Diversion works, through which 1,200 second-feet (later enlarged to 2,000 second-feet) could be diverted from Lost River to the Klamath River; and the Lower Lost River Diversion Dam and accompanying canal, distribution, and drainage systems. These features greatly reduced the flow into Tule Lake and, by 1940, resulted in the reclamation and full development of 33,000 acres of the former lake bed. Further investigations in 1940 resulted in the finding that construction of additional works to increase the acreage reclaimed from the lake bed was justified. In 1942, works consisting of pumps, canals, and a tunnel to the Lower Klamath Lake area, of sufficient capacity to remove 150 second-feet (later enlarged to 250 second-feet) of water from the Tule Lake sump to the Klamath River by way of Lower Klamath Lake were completed.

Development of the Tule Lake lands has been, of necessity, a long-time but steadily progressive program. As lands were reclaimed, they were opened for homesteading. This program has resulted in the reclamation of about 47,500 acres of homestead lands. In addition, about 17,000 acres are less completely protected and are leased subject to occasional flooding. Diversion works and two reservoirs are operated in conjunction with a diked sump covering approximately 13,000 acres of the original lake bed to protect lands that have been reclaimed. The reclaimed area of the Tule Lake bed became developed and settled to such an extent that a water district could be formed to negotiate for repayment of construction costs allocated to benefited lands pursuant to the Reclamation Act of June 17, 1902 (32 Stat. 388). Consequently, on March 11, 1952, the Tulelake Irrigation District was organized.

Description of District

The district is located in Siskiyou and Modoc Counties and includes the land formerly in the Tule Lake Division of the Klamath Project. The major portion of the area consists of lands reclaimed from the bed of Tule Lake. The terrain is flat and slopes toward the sump area at a rate of about three feet per mile. Elevations range generally from 4,100 feet in the northwest portion of the district to 4,030 feet near the sump area.

The soils over most of the district are lacustrine in origin and are quite similar throughout the area. Surface soils vary from a sandy loam to a heavy clay loam, with the heavier soils found in the southern portion of the old Tule Lake bed. The surface soil usually contains a high percentage of organic matter and varies considerably in depth throughout the district. This soil is the most recent sedimentary deposit and in most cases has been modified by cultural practices to become a friable and very productive soil. With the exception of the sandy outer portion of the old lake bed, the subsoils of the district are generally a combination of volcanic material and a diatomaceous deposit. This combination results in a very unusual subsoil which, when wet or moist, is slimy and plastic and has a rubbery consistency. When dry, it is chalky, and crumbles easily when exposed to air. It has an enormous water-holding capacity and a texture that varies from that of a loam to that of a heavy clay.

A comprehensive soil classification for the district has not been made. However, from data that are available, much of the district lands would be classified by United States Bureau of Reclamation standards as Class 1 or Class 2 lands. In 1954, the total assessed valuation of all lands in the district, including improvements, exceeded $3,900,000.

The climate of the area is semiarid in nature. Average annual precipitation is approximately 10 inches, most of which occurs during the winter season, although some precipitation can be expected in every month of the year. The average monthly temperatures range from 28° F. in January to 66° F. in July, with minimum and maximum temperatures near 0° F. and 96° F., respectively. The frost-free period averages about 100 days.

The Tule Lake area has developed into a rich agricultural community producing excellent crops, al-

though climatological factors somewhat limit the variety. The principal crops in the district are barley, potatoes, alfalfa, and alsike clover seed. The lack of processing facilities restricts the growing of many crops, such as table vegetables and sugar beets.

The Upper Klamath Basin offers very little in the way of an agricultural processing industry, but is well served with transportation facilities. It is traversed by both the Southern Pacific Railroad and the Great Northern Railway, both of which have numerous sidings in the area. State Highway 139 also passes through the middle of the area. The principal, and nearest, large markets are Portland, Oregon, and Sacramento and the San Francisco Bay area in California. The only community located within the district is the town of Tulelake, which has an estimated population of 1,100. The nearest large community is the City of Klamath Falls, Oregon, located about 30 miles to the northwest.

Water Supply

The Tule Lake area is supplied with water from both Lost River and Klamath River. Diversion to the main canal serving the area is made from Lost River. However, Klamath River water can be supplied to Lost River via a connecting diversion canal (two-directional flow), or through the "A" (main) canal. Lost River provides practically all of the natural drainage for higher project lands and makes possible multiple re-use of return flow from water applied for irrigation at higher elevations in the basin. Most of the supply to the Tule Lake area consists of such return flows, supplemented as necessary by Klamath River water. Studies made by the United States Bureau of Reclamation indicate that the water supply available from the Lost and Klamath Rivers is ample for the district's requirements. The quality of the water supply is excellent for irrigation purposes.

Irrigation and Drainage

Most of the irrigation and drainage systems in the Tulelake Irrigation District were constructed by the United States Bureau of Reclamation prior to opening the lands to homesteading. Until 1956, operation and maintenance of project works was performed by government crews, and water was supplied to the district lands on a water rental basis. Charges were based on annual operation and maintenance costs. The rates did not include any component for repayment of construction costs.

The contract entered into by the United States and the Tulelake Irrigation District on September 10, 1956, however, provides for repayment of that part of the construction cost of the Klamath Project which is allocated to lands within the district, and for operation and maintenance of certain project works by the district including the irrigation and drainage systems.

DISSOLUTION OF DISTRICTS

Dissolution of a district may be accomplished by either voluntary or involuntary procedure. Chapters 4 and 5 of Part 11, Division 11, of the Water Code establishes the procedures necessary to carry out voluntary and involuntary dissolution.

With respect to voluntary dissolution, a majority of titleholders of land, who also own a majority of assessed value of the land in the district, may propose dissolution by filing a petition, signed by them, with the district board of directors. Upon the filing of the petition, the district board is required to call a dissolution election. Should two-thirds of the votes cast be in favor of dissolution, the district must then file a petition to determine the validity of the proceedings with the superior court of the principal county in which the district is situated. Upon making such determination, disposing of all contests and decreeing the manner of dissolution, and upon final distribution of all property of the district, the court is required to enter a final decree declaring the district dissolved.

With respect to involuntary dissolution, an action in the superior court of the county may be brought by the Attorney General in the name of the people of the State for the dissolution of an inactive district. Before trial, the court may direct the Department of Water Resources to make an investigation and report such facts as are deemed pertinent, or which may be necessary to enable the court to determine the question of dissolution. After the court has entered a final judgment of dissolution, the county board of supervisors and appropriate county officers become ex-officio directors and officers of the district for the purpose of terminating its activities.

It is often difficult to obtain accurate information regarding the status of defunct districts after a number of years have elapsed. The actual proof as to date and the record of the dissolution of a district is not always readily available. Records of the Department of Water Resources indicate that the Baxter Creek Irrigation District and the Tracy-Clover Irrigation District were dissolved during the period 1951-55.

Following are brief histories of the two districts up to the time of their dissolution. Further information can be found in Bulletin No. 21, "Irrigation Districts in California," 1929, published by the Department of Public Works, Division of Engineering and Irrigation.

BAXTER CREEK IRRIGATION DISTRICT

Location:	North of Honey Lake in Honey Lake Valley, Lassen County
Date of Organization Election:	February 8, 1917
Date of Dissolution Decree:	October 4, 1954
Gross Area:	9,336 acres

The district was organized following a favorable report by the State Engineer, primarily to increase the area irrigated by the waters of Baxter Creek. The district planned to build an earthfill dam across Baxter Creek to augment the short summer supply of water. Bonds in the amount of $310,000 were voted for the project. However, studies made under the direction of the State Water Commission indicated that the water supply for the project was inadequate, and that water rights were questionable. The State Bond Certification Commission was unwilling to certify the bonds until the problems of water supply and water rights were settled.

In 1920, the Tule Irrigation District was formed, comprising 15,000 acres of land lying in Honey Lake Valley located north of Honey Lake and east of the Baxter Creek Irrigation District. This district was organized in anticipation of obtaining a water supply by tapping Eagle Lake, which lies in a closed basin approximately 15 miles northwest of Susanville. The Eagle Lake project consisted of a tunnel from Eagle Lake about one mile in length, sidehill canals, flumes, a siphon across the Susan River approximately three miles in length, and a skeleton distribution system.

A study by the State Water Commission showed that by materially reducing the evaporating surface of Eagle Lake, and by developing water from local sources, sufficient water could be obtained to irrigate 25,000 acres of land, enough for the acreage within the Tule Irrigation District plus 10,000 additional acres. The State Engineer approved the project with stipulations pertaining to construction and management of the system, and construction was started.

In the meantime, the Baxter Irrigation District had met with little success in resolving its problems. In expectation of obtaining water from the Eagle Lake project, the district abandoned its original plan for storage on Baxter Creek and entered into an agreement with the Tule Irrigation District by which the system diverting water from Eagle Lake would be jointly owned by the two districts, with the exception of certain features which were to be owned separately. The cost of purchasing the system from the project promoter was set by agreement at $50 an acre, or a total of $1,250,000. The State Bond Certification Commission approved six per cent bonds in the amount of $511,000 for the Baxter Creek Irrigation District and $806,000 for the Tule Irrigation District. The bonds were sold at 95 per cent of par value, yielding $1,250,000, or $50 an acre.

The Eagle Lake project was not successful. The tunnel intake was constructed at a higher elevation than originally planned. The water level of the lake was lowered to the elevation of the intake, and, due to drought conditions, the water level did not subsequently rise sufficiently to supply the districts with the necessary water. The intake was lowered several times at great expense, but the lake continued to recede. The system deteriorated to a point where it was not economically feasible to rehabilitate it. Money spent on the project was a complete loss. The districts, in failing to make beneficial use of the water of Eagle Lake in the time granted, lost their appropriative rights.

In 1945, approval was sought for a proposed plan under which landowners and creditors would agree to settle the more than $3,000,000 indebtedness of the Tule and Baxter Creek Irrigation Districts. The debt included outstanding bonds in the amount of $1,317,000, none having been redeemed, together with accrued interest, penalties, and outstanding warrants. Under the proposed plan, a redemption value was set for each tract of land in the districts. When the landowner paid such sum to the trustee for the creditors, his land would be released from all liability for future assessments levied to pay the indebtedness of the districts. Otherwise, his land would be deeded by the district to the trustee for the creditors.

On January 3, 1946, the Federal Court in Sacramento made its decree granting the landowners' plea in bankruptcy and approving the program worked out with the bondholders' committee. Under the program approved by the court, the landowners could redeem their property from the bondholders for a total sum approximating $130,700, or 3.3 per cent of the total indebtedness. Arrangements were made in August, 1948, for the surrender of the outstanding bonds and for obtaining a final decree in the bankruptcy proceedings, both districts having fulfilled their obligations under the plan entered into between the landowners and bondholders.

The Attorney General, upon recommendation of the California Districts Securities Commission, petitioned the Superior Court of Lassen County for dissolution of the Baxter Creek Irrigation District. The court found that the district had no assets or liabilities and declared the district dissolved in a judgment entered by default, Case No. 7903, on October 4, 1954.

TRACY-CLOVER IRRIGATION DISTRICT

Location:	One mile north of Tracy, San Joaquin County
Date of Organization Election:	May 9, 1922
Date of Dissolution Decree:	January 25, 1954
Gross Area:	1,110 acres

The district was organized, after a favorable report by the State Engineer, for the purpose of acquiring and operating a privately owned irrigation system, including water rights, rights of way, and easements, that had served the lands in the district since 1914.

The water supply for the district was pumped, under riparian rights, from the Barge Canal, an artificial waterway used as an intake from Tom Paine Slough, tributary to Old River, a branch of the San Joaquin River.

The district proposed a bond issue of $55,500 for the purchase and reconstruction of the irrigation system. The State Bond Certification Commission reported favorably on an issue of $52,170 at six per cent. The bonds were voted by the district, and the property was purchased.

From the beginning, the district operated in a condition of chronic delinquency and first defaulted on bond interest payments in January, 1933. In October, 1933, the district made application to the Reconstruction Finance Corporation for a loan of $20,868 under provisions of the Emergency Farm Mortgage Act of 1933. Proceeds of the loan would be used for the purpose of reducing and refinancing the outstanding indebtedness, including outstanding bonds and payment of interest in default, at approximately 33⅓

cents on a dollar. The Reconstruction Finance Corporation authorized a loan of $20,000, permitting the district to offer settlement at 35.538 cents on the dollar. One bondholder refused settlement, but over 90 per cent of the bonds were deposited, which was enough to insure the success of the plan. The district operated under the jurisdiction of the Districts Securities Commission from 1933 until 1941. The refunding bonds were retired with a final payment of $10,000 in 1951.

By 1953, less than one-half of the 1,100 acres in the district was under cultivation, due to surburban expansion of the City of Tracy into the district area. Most of the land still in use for farming was irrigated from wells drilled by the landowners. The district had little reason for continuing in existence and, consequently, voted for voluntary dissolution. The district was dissolved on January 25, 1954, by order of the Superior Court for San Joaquin County, Court Case No. 55450.

OTHER CHANGES IN DISTRICT ORGANIZATION

The annexation of one irrigation district to another is accomplished by the procedures provided in Article 5, Chapter 3, Part 11, Division 11 of the Water Code.

EL CAJON IRRIGATION DISTRICT

The only annexation to take place during the period 1951-55 was the annexation of the El Cajon Irrigation District to the La Mesa, Lemon Grove, and Spring Valley Irrigation District on August 27, 1954. The name of the combined district was changed to the Helix Irrigation District on July 1, 1956.

The La Mesa District was an old and well established district, having been formed on October 17, 1913, and was the largest district in southern California in which residential development predominated over agriculture. The district received water principally from the Colorado River through The Metropolitan Water District of Southern California and the San Diego County Water Authority.

The El Cajon District, at the time of annexation, was relatively new, having been formed on November 17, 1950. A large portion of the acreage in the district was agricultural, the remaining portion consisting of subdivided lands with homes and small businesses. It was anticipated that, when water became available, agriculture in the district would rapidly give way to urban development. The district was formed in order to acquire water from the Colorado River.

Both districts were located in San Diego County just east of the City of San Diego. The El Cajon District was located primarily in El Cajon Valley, and was composed of many noncontiguous parcels of land. The portion of the La Mesa District that was located in El Cajon Valley was also made up of noncontiguous parcels. Some parcels in both districts were surrounded by lands of the other district.

The El Cajon Irrigation District applied for annexation to the San Diego County Water Authority and The Metropolitan Water District of Southern California in March, 1951, for the purpose of obtaining water from the Colorado River. It was evident that the El Cajon District should become a part of the La Mesa District, or should operate in conjunction with it, in order to avoid duplication of transmission and distribution lines. The terms and conditions for annexation submitted by the San Diego County Water Authority and the Metropolitan Water District to the El Cajon District in April, 1951, included a requirement that the district make some arrangement to unite with the La Mesa District.

From June, 1951, to February, 1954, studies were conducted by the El Cajon and La Mesa Districts to determine the desirability, costs, and terms of a merger. From the beginning, both districts looked favorably upon a merger, but the La Mesa District objected to uniting under the procedure provided in the Water Code for consolidation of two or more irrigation districts (Chapter 3, Part 11, Division 11), having no desire to lose its identity and thus jeopardize its established standing in the bond market. The proposed merger of the El Cajon and La Mesa Districts was made possible by a new annexation act (Article 5, Chapter 3, Part 11, Division 11, Water Code, added by Chapter 1550, statutes of 1953) tailored to permit the joinder of the two districts without the objectionable creation of a new agency. The annexation of the El Cajon District to the La Mesa District proceeded without undue difficulty, and in February, 1954, the Boards of Directors of the two districts, at a joint meeting, passed resolutions agreeing to the terms of the annexation, following closely the recommendations of the State Engineer.

Among others, the terms of annexation included provisions that the El Cajon District authorize bonds in the amount of $2,750,000 for the construction of a distribution system for the district and for connection to the existing system of the La Mesa District, and that the El Cajon District petition for and attain annexation to the San Diego County Water Authority and the Metropolitan Water District in order to obtain Colorado River water. Pursuant thereto, the El Cajon District passed a $2,750,000 bond issue on June 15, 1954. At an election held July 20, 1954, the voters in the El Cajon and La Mesa Districts voted overwhelmingly in favor of merging.

By August 27, 1954, the El Cajon District had made a final audit, paid all current debts, and transferred all office equipment to the La Mesa District, thereby completing the annexation. At an election held November 23, 1954, the voters of the El Cajon District voted in favor of annexation to The Metropolitan Water District of Southern California and the San Diego County Water Authority, and the annexation became effective for all purposes on December 20, 1954.

ACTIVITIES OF CALIFORNIA DISTRICTS SECURITIES COMMISSION AND DEPARTMENT OF WATER RESOURCES WITH REFERENCE TO PUBLIC WATER DISTRICTS

The activities of the California Districts Securities Commission during the first years of its existence were to a large extent concerned with the urgent problem of assisting defaulting districts to refinance and reorganize on a sound basis. In the years following, the continued development of agricultural lands in the State by improvement of existing facilities and construction of new facilities by existing districts and newly formed districts, resulted in an increasing number of applications from such districts seeking approval of the issuance of warrants or bonds to finance district works. In many instances, districts not required by law to have their bonds approved by the commission for certification have done so in order to improve the marketability of the issues and to secure lower rates of interest.

Since 1947, the commission has reviewed and reported on contracts proposed to be executed between the United States and a number of districts for water supplied from federal projects, for construction of distribution systems within the districts by the United States, or for both a water supply and a distribution system.

It is the practice of the commission to refer such applications and contracts to the Department of Water Resources (formerly the State Engineer) for an investigation and report to the commission covering adequacy of the water supply and determination of engineering and economic feasibility.

In view of the continual increase in district activities, the following statement describes the functions of the California Districts Securities Commission and the Department of Water Resources as these functions relate to public water districts.

FUNCTIONS OF THE DISTRICTS SECURITIES COMMISSION

The California Districts Securities Commission, created by Chapter 1073, Statutes of 1931 (now codified in Division 10 of the Water Code), is composed of five members: The Attorney General, the Director of Water Resources, the Superintendent of Banks, and two other members appointed by the Governor. The chief statutory functions of the commission, so far as irrigation districts are concerned, are:

1. To investigate and report upon the affairs of districts and the feasibility of proposed works, following receipt of a request from the district for approval of district bonds for certification as legal investments. Following a favorable determination, the Commission approves such bonds for certification by the State Controller as legal investments for funds of banks, insurance and trust companies, State school funds, trust funds, and any funds which may legally be invested in bonds of cities, counties, school districts, or municipalities in the State. (Water Code, Sections 20040-20066.)

2. To supervise the sale and expenditure of the proceeds of bonds which have been certified for legal investments. (Water Code, Sections 20080-20087.)

3. To approve issuance of certificates of deposit for certified bonds. (Water Code, Sections 20100-20107.)

4. To investigate and approve contracts and leases for property entered into by irrigation districts in cases involving annual expenditures exceeding certain minimum amounts. (Water Code, Section 24253.)

5. To investigate and approve all contracts for lease or sale of surplus water by irrigation districts. (Water Code, Section 22260.)

6. To examine and report upon certain contracts entered into with the United States pursuant to the Irrigation District Federal Cooperation Law. (Water Code, Sections 23222, 23286.)

7. To approve issuance of warrants and levy of assessments by improvement districts, when such warrants are made payable over a period of time in excess of ten years. (Water Code, Sections 23670.1, 23811.)

8. To approve the issuance of time warrants in excess of one-fourth of one per cent of the assessed land valuation. (Water Code, Section 24628.5.)

9. To approve plans for extending times of maturity for bonds and warrants. (Water Code, Sections 24763, 24764.)

10. To investigate and report upon proposed bond issues. (Water Code, Sections 24958-24961.)

11. To approve issuance of refunding bonds (Water Code, Sections 25036-25041), the modification thereof (Water Code, Sections 25090-25114), and the amount of any refunding bond sinking fund. (Water Code, Section 25061.)

12. To approve issuance of revenue bonds. (Water Code, Section 25241.)

13. To approve allocation of district revenues to a reserve fund established to pay the interest or principal of any district bonds (Water Code, Section 25280), approve call and redemption of bonds prior to maturity (Section 25300), approve sale of bonds at private sale (Section 25333), and approve terms for exchange of refunding bonds. (Section 25335.)

14. To survey the financial needs of defaulting districts and report to county board of supervisors on failure of district to levy assessments. (Water Code, Section 26500.)

Certain functions of the commission apply to water storage districts, water conservation districts, county water districts, county water works districts, public utility districts, reclamation districts, drainage districts, and similar districts. If the bonds of such districts are certified pursuant to the provisions of the Districts Securities Commission Law, such districts subsequently come under the supervision of the commission.

The commission was established in 1931 as the result of a special legislative investigation conducted for the purpose of assisting irrigation districts and other districts in efforts to reduce their indebtedness and improve their credit standing, and to obtain financing for needed improvements at reasonable rates of interest.

During the years immediately following, the commission approved the refinancing plans of 59 districts that had defaulted on principal and interest payments due on outstanding bonds, involving the issuance of refunding bonds in the amount of $70,202,000. The successful refinancing of these districts did much to restore the credit standing of irrigation districts and other districts throughout the State, and assisted them in securing financing on a favorable basis for projects developed in later years. The success of the refinancing program is evidenced today by the fact that none of the refinanced districts are delinquent in payment of bond interest and principal. Many districts have decreased their outstanding debts by making substantial principal payments in advance of maturity dates.

Statistics concerning the commission's activities since its organization in 1931 to January 1, 1956, include:

Number of districts reporting to commission as of December 31, 1955	141
Number of refinancing plans approved by commission	59
Number of orders issued by commission approving the feasibility of district projects involving the issuance of new bonds	58
Number of orders issued by commission approving new bonds as eligible for certification by the State Controller	50
Number of orders issued by commission approving issuance of warrants	79
Number of water service contracts between the United States and districts examined and reported upon by commission	33
Number of contracts between the United States and districts for repayment of facilities constructed by the United States examined and reported upon by the commission	17
Total amount of district bonds and warrants outstanding as of June 30, 1955	$85,144,200
Total amount of district refunding bonds issued pursuant to approved refinancing plans	$70,202,000
Principal amount of new district bonds approved by commission as eligible for certification by State Controller	$115,485,500
Principal amount of district warrants approved by commission	$7,093,200
Total amount of repayment contracts for facilities constructed by the United States examined and reported on by the commission	$70,990,000

Information regarding contracts between irrigation districts and the United States which have been passed upon by the California Districts Securities Commission as of December, 1955, is presented in Table A.

FUNCTIONS OF THE DEPARTMENT OF WATER RESOURCES

The Department of Water Resources is charged by law with various functions in connection with the formation and operation of certain types of districts. These duties include the following:

1. Provide information, so far as it may be practicable, to persons contemplating the formation of irrigation districts. (Water Code, Section 20625.)

2. Investigate and report in writing upon the feasibility of proposed irrigation districts prior to formation. (Water Code, Sections 20820-20824.)

3. The Department may, at any time, make an examination of the affairs of any irrigation district or call upon the authorities of the district for any information it desires and make any report thereon it deems advisable. (Water Code, Section 22338.)

4. Investigate and report to the board of directors of an irrigation district concerning construction work financed from the proceeds of certified bonds. (Water Code, Section 22335.)

5. Investigate and report upon proposals to consolidate two or more county water districts, recommending final boundaries and the apportionment of any outstanding indebtedness. (Water Code, Sections 32670-32672.)

6. Numerous duties in connection with the formation and operation of water storage districts, under Division 14 of the Water Code.

TABLE A

CONTRACTS ENTERED INTO BETWEEN UNITED STATES AND IRRIGATION DISTRICTS WHICH HAVE BEEN PASSED UPON BY CALIFORNIA DISTRICTS SECURITIES COMMISSION TO DECEMBER, 1955

Contracting district or agency	Type of contract	Dates of action on contract				Maximum annual water supply		Maximum obligation incurred	
		District Securities Commission	Special district election	Executed by district	Confirmed by superior court	Class I water, in acre-feet	Class II water, in acre-feet	Water service annually	Construction repayment
Friant-Kern Canal

* Amendatory or supplementary contract.
9d—Repayment contracts for the construction of distribution systems entered into pursuant to Section 9(d) of the Reclamation Project Act of 1939.
9e—Water service contracts entered into pursuant to Section 9(e) of the Reclamation Project Act of 1939.

In addition to miscellaneous statutory duties imposed upon it by various other district acts, the Department of Water Resources, under Division 10 of the Water Code is required:

1. To make inspections from time to time of the progress of works financed from the proceeds of certified bond issues and to report thereon to the California Districts Securities Commission.

2. To approve, on behalf of the commission, any deviation from plans or expenditure schedules previously approved by the commission if, in the judgment of the department, such deviation is reasonable and proper.

3. To make written reports to the commission upon the completion of the work to the satisfaction of the department, submitting therein a schedule of expenditures actually made from proceeds of the certified bond issues.

STATISTICAL INFORMATION FOR PERIOD 1951-55

During the period, 1951-55, there were a maximum of 118 organized irrigation and water storage districts existing at one time. Annual reports were received each year from about 105 of the districts. Throughout the period, the Big Valley, Hills Valley, Kings River Delta, Lucerne, Mendota, Mokelumne River, and Tule Irrigation Districts reported that they were inactive. The Central California, Elk Grove, Galt, Kinneola, South Bay, and Tulelake Irrigation Districts were formed. The Baxter Creek and the Tracy-Clover Irrigation Districts were dissolved, the former by involuntary procedure and the latter by voluntary procedure. The El Cajon Irrigation District was annexed to the La Mesa, Lemon Grove, and Spring Valley Irrigation District.

The Camp Far West, Carpenter, James, Potter Valley, Serrano, Terra Bella, and Woodbridge Irrigation Districts completed retirement of their bond issues, while the Central California, Imperial, La Mesa-Lemon Grove and Spring Valley, Oakdale, Paradise, Scott Valley, and South San Joaquin Irrigation Districts sold new bonds in the total amount of $64,940,000. Five districts were in default prior to 1951. Three of them, the El Camino, Maxwell, and Stinson Irrigation Districts, remain in that status. Landowners in the Maxwell Irrigation District have acquired all outstanding bonds and have placed them in escrow pursuant to agreement. The bonds are considered unenforceable by the District's legal advisor. The Baxter Creek and Tule Irrigation Districts liquidated their indebtedness according to terms of an interlocutory decree entered by the United States District Court for Northern California on January 3, 1946.

The tables following this section contain a summary of information reported by the irrigation districts and water storage districts for the years 1951 through 1955. They cover the field operations and the financial status of the districts at the close of each year.

Tables of Statistical Data for Each Year of the Period 1951-55

Irrigation district statistics are presented in Tables I through VI for each year of the period 1951-55.

Table I gives data on source and distribution of water supplies. Data showing "Water Diverted in Acre-Feet" are believed to be more reliable than those showing "Water Reported Delivered in Acre-Feet." The latter is more difficult to measure, and the uses are varied and mixed in numerous instances. "Water Lost and/or Spilled" is believed to occur in many more instances than is indicated in the tables.

Table II gives data on irrigated acreage, dry-farmed acreage, and crops grown in the districts.

Table III presents a summary of assessments levied, amount of assessments delinquent, tax sales certificates, and tax deeded lands. The column shown in this table in previous reports on "Percentage of Assessment Delinquent" has been deleted because of apparent differences of interpretation as to the basis for computing the percentage.

Table IV shows annual receipts and disbursements. Inasmuch as the accounting procedure followed by the districts is not uniform, an accurate analysis of such data is precluded. An attempt has been made to present the figures reported in the annual statements in such a manner as to facilitate comparison of district operations from year to year. Strict comparisons of disbursements for administration with those for operation and maintenance should not be made in some instances, since a number of districts did not report such expenditures in sufficient detail to make comparisons.

Table V gives data on outstanding bonds and warrants as of December 31 of each year.

Table VI is a directory of irrigation districts.

1951

* Central Valley Project
(a) Unsegregated irrigation and domestic use
(b) Includes water for duck ponds
(c) Includes water used for recharging groundwater
(d) Wells are located in Lake Henshaw basin
(e) Estimated

* Balance shown excludes other funds and securities held.
(a) Includes Administration expenses.
(b) Includes transfer of funds to other accounts.
(c) Fiscal year is on other than a calendar-year basis.
(d) Includes purchase of investment securities or improvement district obligations.
(e) Estimated.
(f) Includes revenues received from assessments.
(g) Includes expenditures for capital improvements.
(h) Includes $6,500,000 proceeds from sale of bonds.
(i) Includes funds received from improvement districts or from sale of improvement district warrants.
(j) Includes $313,922 proceeds from sale of warrants and $190,230 disbursed to retire warrants.
(k) Includes retirement of warrants, notes and/or contracts.
(l) Includes proceeds of $125,000 received from sale of warrants and securities. District advanced $424,575 to Henshaw Drilling Project.

WATER STORAGE DISTRICTS

Buena Vista	1	July 1, 1929	July 1, 1935-1968	6	942,731	——	942,731	846,000	None	None	None	None	None

(a) Bonds have not been presented to district for payment.
(b) Contract executed between District and U.S.B.R. for construction of a distribution system. Contract has not been validated as of December 31, 1951.
(c) Same as "b" above, except that contract has been validated.
(d) District landowners have acquired all outstanding bonds and warrants which are held in escrow pursuant to agreement.
(e) Estimate.
(f) District issued 2d Ref. bonds and paid off debt to R.F.C. "Hold out" bonds of original issues are still in litigation.

(a) Includes water purchased and diverted by gravity.
(b) Includes water purchased and diverted by pumping.
(c) Includes water purchased and pumped from wells.
(d) Includes water for ground water recharge.
(e) Estimated from data available.
(g) Water for irrigation and domestic use; not segregated
(h) Includes water pumped for drainage; not used for irrigation.
(k) Wells are located in Lake Henshaw Basin.
(m) Includes water for duck ponds.
* Central Valley Project

TABLE II

(a) Includes crop acreages of Kasson-Banta Irrigated Farms and Contract Holders.
(b) Includes double cropped acreage.
(c) From 1951 crop report.
(d) Imperial crop acreage is the maximum of the reported acreages at the different times during the year.
(e) Estimated.
(g) Fruit and nut trees, nonsegregated.
(h) Orchard and grapes, nonsegregated.

(a) Includes water purchased & diverted by gravity
(b) Includes water purchased & diverted by pumping
(c) Includes water purchased & pumped from wells
(d) Includes water for ground water recharge
(e) Estimated from available data
(g) Water for irrigation and domestic use; not segregated
(h) Includes water pumped for drainage; not used for irrigation
(k) Wells are located in Lake Henshaw Basin
(m) Includes water for duck ponds
* Central Valley Project

(a) Includes crop acreages of Kasson-Banta Irrigated Farms and Contract Holders.
(b) Includes double cropped acreage.
(d) Imperial crop acreage is the maximum of the reported acreages at the different times during the season.
(e) Estimated
(g) Fruit and nut trees, nonsegregated.
(h) Orchard and grapes, nonsegregated.
(k) Assessed acreage based on an adjusted acreage .

DIRECTORY OF CALIFORNIA IRRIGATION DISTRICTS

For the year 1953
(Continued)

Name of District	County	Estimated Population			President	District Officials		Manager or Engineer	District Office Address
		Inside Cities and Towns	Outside Cities and Towns	Total		Secretary	Attorneys		
Kendota*	Fresno	—	—	—	K. H. Kruse	Pearl Thompson	—	—	Firebaugh, Rt. 2, Box 277
Merced	Merced	26,000	16,500	42,500	E. B. Wood	Carl T. Christianson	C. Ray Robinson	Kenneth R. McSwain	Merced, P. O. Drawer, 759
Modesto	Stanislaus	35,000	50,000	85,000	M. L. Huff	L. E. Either	Vernon F. Gant	C. E. Plummer	Modesto, 823 - 11th Street
Mokelumne River*	San Joaquin	—	50	50	Miel Locke	Thos. S. Louttit	—	—	Stockton, 906 California Bldg.
Montague	Siskiyou	750	250	1,000	Sidney O'Connor	Ileana Williams	Tebbe & Correia	—	Montague, P. O. Box 247
Naglee-Burk	San Joaquin	—	325	325	J. F. Borges, Jr.	Geo. Wadsworth	Geo. Wadsworth	—	Tracy, 105-110 Roberts Bldg.
Nevada	Nevada, Placer	—	—	—	E. B. Power	H. George Scobie	P. J. Minasian	A. E. Kuiper	Grass Valley, 144 So. Auburn Street
Newport Heights	Orange	8,640	875	9,515	Charles W. Te Winkle	A. C. Swartz	A. W. Rutan	A. C. Swartz	Costa Mesa, 116 E. 18th Street
Newport Mesa	Orange	1,000	800	1,800	Cunning Butler	W. K. Caley	LeRoy P. Anderson	W. K. Caley	Costa Mesa, 543 W. 18th Street
Oakdale	Stanislaus, San Joaquin	7,500	9,500	17,000	Edwin Koster	C. W. Quinley	P. J. Minasian	R. E. Hartley	Oakdale, P. O. Box 487
Orange Cove	Fresno, Tulare	2,522	1,550	4,072	Harvey S. Chase	A. J. Vortmann	LeRoy Mc Cormick	J. F. Sorensen	Orange Cove
Oroville-Wyandotte	Butte	1,000	4,000	5,000	G. C. Fleming	H. Marlow	Minasian & Minasian	L. B. Dunlop	Oroville, P. O. Box 308
Palmdale	Los Angeles	3,663	1,300	4,963	C. Owen Moulton	W. Earl Carter	Stewart, Shaw & Murphey	Murray D. Pond	Palmdale
Palo Verde	Riverside, Imperial	5,000	6,800	11,800	Horace M. Miller, Jr.	L. S. Shipley	Frank E. Jenney	C. C. Tabor	Blythe, Box 38
Paradise	Butte	—	—	8,500	A. F. Reineke	Gladys Kimball	Joel Bennett	Walter Grimes	Paradise, P. O. Box 1016
Porterville	Tulare	—	3,000	3,000	Maurice Henderson	Mrs. V. K. Falconer	Erling H. Kloster	Ernest L. Northup	Porterville, P. O. Box 1248
Potter Valley	Mendocino	160	500	660	L. L. Hughes	L. S. Clark	Charles Kosch	Roy Nelson	Potter Valley
Princeton-Codora-Glenn	Colusa, Glenn	300	800	1,100	Delbert Calvert	Clyde H. Larimer	Clyde H. Larimer	Max Garbutt	Princeton
Provident	Colusa, Glenn	—	50	50	Walter Calvert	T. E. Balch	F. J. Minasian	T. E. Balch	Willows, 108 N. Shasta Street
Ramona	San Diego	2,000	—	2,000	Oliver B. Carpett	Lois V. Stevens	W. H. Jennings	Elbert N. Ritchie	Ramona, Box 453
Richvale	Butte	250	100	350	Sam Lofgren	Alvin L. Harry	P. J. Minasian	Alvin L. Harry	Richvale
Riverdale	Fresno	100	600	700	Fred A. Hancock	Tina Z. Cushman	Sidney J. W. Sharp	V. L. Atkins	Riverdale
San Dieguito	San Diego	—	—	9,124	Francis S. Wagner	T. F. Harrington	J. M. Cranston	T. F. Harrington	Encinitas, 669 - 2nd Street
Santa Fe	San Diego	—	—	4,200	H. G. Larrick, Sr.	D. M. Bakewell	Ray C. Eberhard	D. M. Bakewell	Rancho Santa Fe
San Ysidro	San Diego	—	—	2,350	C. G. Buehrer	James T. Bishop	Jennings, Engstrand & Hendrikson	C. F. Riddle	San Ysidro, P. O. Box 5
Sanrelito	Tulare	—	525	525	Everett L. Cloer	Irvin H. Althouse	LeRoy Mc Cormick	Irvin H. Althouse	Porterville, Rt. 2, Box 840
Scott Valley	Siskiyou	—	500	500	Fred H. Williams	Ernest P. Smith	Tebbe & Correia	B. P. Casci	Fort Jones
Serrano	Orange	—	700	700	Willard Smith	F. H. Collins	Rutan, Tucker, et al.	—	Orange, Rt. 1, 18021 Lincoln Street
[illegible]	[illegible]	—	—	—	J. J. Peters, Jr.	R. Allen Johnston	Thos. Crowe	Paul Bailey	Chafter, 435 Central W. Highway
Solano	Solano	—	—	—	Wm. Morris Dalley	O. D. Lambert	Leo Dunnell	Howard Stoddard	Suisun, Rt. 1, Box 117
South Bay	San Diego	25,000	—	25,000	Fred Stafford	Walter L. Steele	Paul D. Engstrand, Jr.	—	Chula Vista, 371 E Street
South Fork	Modoc	—	75	75	Arthur Flournoy	C. S. Baldwin	—	—	Alturas, P. O. Box 205
South Montebello	Los Angeles	—	—	—	Floyd N. Haight	Patricia Dee Sinclair	Robert F. Hardesty	Blair J. Glancy	Montebello, 864 W. Wash. Blvd.
South San Joaquin	San Joaquin	9,000	14,000	23,000	John E. Vrieling	E. O. Berdahl	Rutherford, Jacobs, et al.	T. P. Stivers	Manteca, P. O. Box 71
Steel Canyon	San Diego	—	53	53	R. E. Barger	N. A. Mc Keel	—	—	Spring Valley, Star Route
Stinson	Fresno	10	25	35	Wm. H. Noble	T. Wayne Simpson	—	—	Burrel
Stone Corral	Tulare	—	—	80	Gordon H. Garland	John R. Locke, Jr.	John R. Locke, Jr.	Harold Shawl	Visalia, 127 N. Church Street
Stratford	Kings	—	1,500	1,500	Richard Lovelace	Gloria J. Dufur	Ronald B. Harris	—	Stratford
Table Mountain	Butte	—	12	12	Margaret B. Chaffin	B. E. Bailey	—	A. L. Chaffin	Oroville, Rt. 1, Box 153
Terra Bella	Tulare	800	700	1,500	Howard H. Mc Neill	Ernest H. Thiesse	James K. Abercrombie	Howard H. Mc Neill	Terra Bella, P. O. Box 576
Thermalito	Butte	—	4,500	4,500	Dan Raynor	Hally Gibson	P. J. Minasian	J. W. Mc Donald	Oroville, Rt. 3
Tracy Clover	San Joaquin	—	—	—	—	—	—	—	Tracy, 105-110 Roberts Bldg.
[illegible]	Fresno	750	750	1,500	Melvin D. Hughes	Iva Johnson	Claude L. Rowe	R. A. Miller	Tranquillity, P. O. Box 277
Tulare	Tulare	12,000	5,000	17,000	R. H. Sisson	David L. Zack	Henry, Kuney & Moran	L. E. Robertson	Tulare, P. O. Box 163
Tule*	Larsen	—	—	—	L. E. Blakeley	Esther B. Delbon	J. C. Cook	Ellis R. Delbon	Turlock, Berg Bldg.
Tulelake	Siskiyou, Modoc	—	—	—	—	—	—	—	Tulelake, 325 Main St.
[illegible]	Stanislaus, Merced	16,500	41,000	57,500	A. R. Crowell	R. W. Tillner	J. C. Cook	R. V. Meikle	Turlock, 117 W. Main Street
Vandalia	Tulare	—	—	150	B. W. Althouse	H. C. Pegram	James K. Abercrombie	I. H. Althouse	Porterville, P. O. Box 1026
Vista	San Diego	12,085	—	12,085	V. J. Becherer	L. R. Burzell	L. A. Wright, II	L. R. Burzell	Vista, P. O. Box 696
Walnut	Los Angeles	—	—	—	Fred Collins	Mrs. H. A. Masters	—	—	Rivera, 2268 So. Passons Blvd.
Waterford	Stanislaus	1,750	975	2,725	J. W. Quesenberry	C. W. Slaughter	P. J. Minasian	W. Lehmkuhl	Waterford, P. O. Box 187
West Side	San Joaquin	4,000	1,500	5,500	F. O. Hilken	Wylsey R. Hansen	George Wadsworth	W. F. Woolley	Tracy, P. O. Box 177
West Stanislaus	Stanislaus	500	2,000	2,500	W. W. Cox	Lawrence D. Harrison	Vernon F. Gant	W. F. Woolley	Westley
Woodbridge	San Joaquin	15,000	40,000	55,000	J. E. Stewart	Carl A. Klenk	Jones, Lane, et al.	Kenneth S. Welsh	Lodi, Rt. 2, Box 148

(a) Includes water purchased and diverted by gravity
(b) " " " " " pumping
(c) " " " " pumped from wells
(d) Includes water for ground water recharge
(e) Estimated from available data
(g) Water for irrigation and domestic use; not segregated
(h) Includes water pumped for drainage; not used for irrigation
(k) Wells are located in Lake Henshaw Basin
(m) Includes water for duck ponds
* Central Valley Project

TABLE II

CALIFORNIA IRRIGATION DISTRICTS CROP REPORTS FOR 1954

Name of Districts	District in Acres			Kind and Acreage of Irrigated Crops												Summary of Acres Cropped		
	Gross	Assessed 1954-1955 Fiscal Yr.	Irrigable	Alfalfa	Clover & irrigated pasture	Cotton	Rice	Grain & grain hay	Other field crops	Vegetables & truck	Grapes	Deciduous fruits	Nuts & olives	Citrus & avocados	Not segregated	Irrigated	Dry farmed	Total cultivated

(a) Includes crop acreages of Kasson-Banta Irrigated Farms and Contract Holders.
(b) Includes double cropped acreages
(d) Imperial crop acreage is the maximum of the reported acreages at the different times during the season.
(e) Estimated
(g) Fruit and nut trees, nonsegregated
(h) Orchard and grapes, nonsegregated
(k) Assessed acreage based on an adjusted acreage

(a) Includes water purchased & diverted by gravity
(b) " " " " " " pumping
(c) " " " " pumped from wells
(d) Includes water for ground water recharge
(e) Estimated from available data
(g) Water for irrigation and domestic use; not segregated
(h) Includes water pumped for drainage; not used for irrigation
(k) Wells are located in Lake Henshaw basin
(m) Includes water for duck ponds
* Central Valley Project

(a) Includes crop acreages of Kasson-Banta Irrigated Farms and Contract Holders.
(b) Includes double cropped acreages
(c) From 1954 crop report
(d) Imperial crop acreage is the maximum of the reported acreages at the different times during the season.
(e) Estimated
(g) Fruit and nut trees, nonsegregated.
(h) Orchard and grapes, nonsegregated.
(k) Assessed acreage based on adjusted acreage
